		100.00

Procedure

Prepare a suitable quantity of Phase A by combining the ingredients and milling or grinding the mixture until the pigments are uniformly dispersed and no further color change is noted upon continued processing. To a suitably sized vessel, weigh in the Phase B ingredients. Heat to 85°C and begin mixing when possible. Continue mixing and add the Phase A dispersion. Mix until uniform. Continue mixing and add Phase C. Mix until uniform. Continue mixing and cool to the desired filling temperature.
