**Procedure**

In the main processing tank, combine Phase A in order with mixing. Mix until lump-free and uniform. Charge Phase B in a separate vessel. Premix and paste Phase C in another container and add to Phase B with mixing. Mix until clear and uniform. Premix Phase D in another container until all solids dissolve. Combine Phases B/C/D and E. Slowly add in small increments to Phase A with good mixing. Continue mixing until uniform and smooth.  
 Viscosity (RVT 7-10): 90,000
